Paresh Prajapati

AI & ML Engineer
Ahmedabad, Gujarat, India | github.com/Pareshprajapati-777 | linkedin.com/in/pareshprajapati-co | pareshprajapati999b@gmail.com

Professional Summary

B.Sc. Information Technology student with hands-on experience building and deploying ML and deep-learning systems, including full-stack real-time applications. Built independent AI/ML projects covering CNN image classification, face recognition, music recommendation, and ML-based forecasting using TensorFlow/Keras, OpenCV, Scikit-learn, Pandas, and Streamlit. Currently pursuing an AI & ML Engineer certification and seeking an entry-level AI/ML Engineer role.

Technical Skills

Languages: Python, C/C++, SQL
Libraries: Pandas, NumPy, Matplotlib, Seaborn, Folium, TensorFlow, Keras, Scikit-learn
Deep Learning & ML: CNN, Transfer Learning, Model Training & Evaluation
Frontend: Streamlit
Tools: Jupyter Notebook, VS Code, GitHub, Git, Google Colab
Core Strengths: Problem-Solving, System Design Thinking, Self-learning

Education

Bachelor of Science (B.Sc.) in Information Technology — Gandhinagar, Gujarat
Swarrnim University — *2025 – Present — CGPA: 6.09 / 10.0*

Higher Secondary Certificate (H.S.C.) — Commerce — Ahmedabad, Gujarat
Super High School — *2024 – 2025 — 90% (Distinction)*

Secondary School Certificate (S.S.C.) — Ahmedabad, Gujarat
Super High School — *2023 – 2024 — 80%*

Key Technical Projects

Face Mask Detection System | *TensorFlow, Keras, OpenCV, CNN, Transfer Learning*

- GitHub Repository: Built an end-to-end real-time pipeline to classify masked and unmasked faces in video streams.
- Implemented CNN classification and Transfer Learning using MobileNet for feature extraction.
- Integrated OpenCV for face localization, preprocessing, normalization, confidence filtering, and low-latency real-time alerts.

Face Attendance System | *OpenCV, face_recognition, Streamlit, SQLite*

- GitHub Repository: Engineered an automated biometric attendance pipeline using live facial feature extraction.
- Extracted 128-dimensional facial embeddings using deep metric learning for identity matching and verification.
- Built a Streamlit frontend with SQLite for attendance records and a CSV exports.

MNIST Handwritten Digit Classification | *TensorFlow, Keras, CNN, Model Training & Evaluation*

- GitHub Repository: Developed a multi-layer CNN for handwritten digit recognition using the MNIST dataset.
- Implemented image preprocessing, pixel normalization, convolutional filtering, max pooling, and dropout regularization.
- Evaluated classification using categorical cross-entropy loss, multiclass confusion matrices, and precision-recall metrics.

AI Solar Planning & Financial Analysis System | *Python, Scikit-learn, Streamlit, ML Forecasting, Pandas*

- GitHub Repository: Developed an ML forecasting and financial analytics application for rooftop solar feasibility assessment.
- Trained Scikit-learn regression models to estimate solar irradiance, energy output, and system generation efficiency.
- Built CapEx, ROI, and multi-year cost analysis modules with an interactive Streamlit dashboard for parameter tuning and visualization.

Sangeet — Music Recommendation System | *Python, ML, Pandas, SQL, Streamlit*

- GitHub Repository: Built a music recommendation and discovery system using Python, ML, Pandas, SQL, and Streamlit.
- Developed an interactive dashboard for music search, analysis, recommendations, playlists, and favorites.
- Implemented content-based recommendations using audio features and cosine similarity with analytics and ML/DL experimentation.

Certifications

AI & Machine Learning Engineer Program: Creative Design & Multimedia Institute (CDMI), Ahmedabad — Jan 2026 – Present
